

Premier Pilots

www.premierpilots.net

The best 1/4 Scale Pilot figures available for Radio Control Planes.

General Description.

Each pilot has a full body. At only 5.5 oz clothed, they are the lightest articulating pilots available. Each pilot body is made from 17 different moulds to enable lifelike poses in your aircraft. The shoulders are adjustable in width from 3-3/4" to 4-1/4". The shoes and legs may be removed to fit in limited cockpits. The clothing has been sewn from actual cloth fabric. You may choose from 3 different color shirts: Red, White or Blue. All pilots have tan pants, brown belt and brown shoes. 15" tall. The white shirts and white cap may be dyed to your favorite color.

Included with each pilot are the following accessories:

White cap, Sunglasses, Headset, Parachute bag and harness, 4 point harness and seat belts and Watch
Additional items may be purchased separately.

Additional accessories are available:

English driving hat,
Flight suit,
Leather Jacket and helmet,
Goggles

The headset is delicate and may need to be reglued upon arrival. Use Cyanoacrylate adhesive (CA) to attach the ear cups to the head strap. The headset is easily knocked off the pilot's head. Add a little plumber's goop on the ear cups fit the headset into position on the pilot's head and rubber band in place until dry. The watch will also have to be glued on the wrist with CA. The sunglasses are made from fine brass wire and may need adjustment. The lenses have been glued with CA but may come loose due to handling. Should the lens become loose add a tiny drop of Cyanoacrylate adhesive. A tiny bit of plumber's goop on the inside of the hats will also keep them in place.

The arms are shipped in the "narrow position" (3-3/4"). If you have room in the cockpit, pull the arms out of the shoulder to the 4-1/4" position, this is the correct shoulder width for this scale pilot. To do this, pull the shirt back to expose the shoulder, pull the arm out of the shoulder socket until you hear the "click".

To change the clothes or put on the jacket, you will have to pull the hands off the arms, pull straight twisting back and forth. The feet come off the legs the same way.

Your comments and suggestions are always welcome.
